

City of Afton Electrical Outlet Procedures & Information

Note: No modifications or tampering to the wiring circuits, outlets, and lighting are permitted. If violations occur you and/or your organization will be held liable for all damages and injuries. If you will be using the 110 volt 30 & 50 amp outlets or the 220 volt outlets, inspect the outlets prior to your event to determine if your plugs will fit the outlets. If they do not, you need to change your plug to match prior to use.

Appliances: When several appliances eg. coffee pots, roasters, heaters, etc. are used, do not plug them in and turn on at the same time. Starting several appliances at the same time will disconnect circuit breakers and turn off electrical power. Wait until an appliance is up to operating temperature before you plug in the next appliance.

Circuit breakers: If a circuit breaker disconnects call 651-387-6587 to have the breaker reset.
